WORK EXPERIENCE

BrookField West, Hybrid — FullStack Engineer

August 2025 - Present, Hybrid

WEBSITE

CzettaPay — payments & VTU ecosystem (B2B + B2C). czettapay.com

- Built **Anchor**, the telco integration API connecting to **MTN, Airtel, Glo and gmobile** for airtime/data top-up and SMS, with per-client API-key auth; it powers every CzettaPay backend.
- Built **czetta-api**, a commission-based B2B wallet/payment API with **TEST/LIVE environment separation**, webhook delivery and ledger reconciliation (**Express 5, Prisma, PostgreSQL, Redis**).
- Core engineer on the **CzettaPay web platform (Next.js 16)**: Paystack/Flutterwave wallet funding, bulk and recurring airtime/data, electricity billing, SMS campaigns, API-key lifecycle and per-user spend limits.
- Built the **B2C consumer backend on Bun + Hono**: phone-first and Google sign-in, wallet, bills, points/gamification, referrals, **BullMQ** workers and an AI chat assistant on **AWS Bedrock AgentCore**.
- Led financial-integrity hardening across all four services: **tamper-evident hash-chained audit log**, Decimal.js money arithmetic, pre-flight spend caps, alert routing and ledger reconciliation.
- Built the **Next.js admin dashboards** for Anchor and the B2C platform (user management, analytics, provider settings).

The Mars Program — Learning Management System. themarsprogram.com

- Built a multi-role LMS (**Next.js 16, Prisma 7, PostgreSQL**) for students, teachers, parents, schools and super-admins.
- Built the parent portal: child profiles, course catalogue, parent-controlled course pacing and **Paystack subscription payments** with course access tiers.
- Delivered end-to-end onboarding (individual sign-up with email verification, school registration, super-admin review) and rebuilt teacher

STACK

Proficient: PHP 7+, JavaScript(ES6+), NodeJs, MongoDB, MySQL, Jest, ReactJS, NextJS, TypeScript, Canva, Postman, TailWind CSS, Bootstrap, Laravel, Redis(Cache), Restful, Prisma ORM, API, AWS (Bedrock, S3), Bun, Hono, Vite, Socket.IO, BullMQ, OpenAPI/Swagger, Docker.

AWARDS

[HackerRank] coding challenge (Problem-Solving) I earned two stars for problem-solving on HackerRank, with most of my solutions being implemented using PHP.

Licenses & Certification

LinkedIn: Javascript Essential Training

LinkedIn: React Essential Training

LinkedIn: Learning TypeScript

UDEMY: Node.js, Express, MongoDB

dashboards (classes, grading, curriculum, students) pixel-accurate from **Figma**.

- Integrated the **MARTIE AI tutor** (AWS Bedrock AgentCore), live search and fully responsive student/teacher experiences.

UDEMY: Javascript: Algorithms and data-structure

UDEMY: Cognitive Behavioural Therapy (CBT)

Cumulus HQ, Remote — *Frontend Engineer (Contract)*

2026, Remote

[WEBSITE](#)

WorkSpaces On Demand — multi-tenant SaaS for provisioning and governing AWS WorkSpaces desktops.

- Built the entire frontend with **React, TypeScript, Vite, Tailwind CSS and shadcn/ui**.
- Generated a fully typed API client from the backend **OpenAPI** contract (openapi-typescript + openapi-fetch); JWT auth with silent refresh, **MFA/TOTP** enrolment and five role-based surfaces.
- Built tenant onboarding (Active Directory directory linking), workspace provisioning with long-running operation polling, governance and desktop policy, and SuperAdmin drift, directory and offboarding dashboards.
- Drove an accessibility and polish pass: **WCAG AA** colour tokens, skeleton loading, actionable empty states and reduced-motion support; ran live end-to-end testing rounds with the backend team.

LANGUAGES

Yoruba native

English C2, fluent

Kaylabit, Remote — *Full-stack Engineer*

June 2025 – May 2026 -, Remote

[WEBSITE](#)

Fintech app: crypto trading, gift cards, VTU/bill payments, virtual cards and wallets.

- Extended the **Node.js/Express + MySQL** API: super-admin-switchable crypto custody provider (**Quidax/Threshold**), server-side validation of buy/sell totals against desk rates and idempotent transactions.
- Implemented **role-based access control** for admin departments (COO, Operations, IT, KYC, CSR), user activity audit logging, account revoke/restore and invite-based admin self-onboarding.
- Documented the full API surface with **Swagger/OpenAPI**, gated behind auth; hardened rate limiting and sanitized third-party provider errors.
- Integrated **VTU.ng and Redbiller** for airtime, data and electricity, and moved external transfers to a manual admin payout flow.
- Built **React admin dashboard** features: manual payments, activity logs, crypto provider settings, gift-card evidence review and email escalation for approvals, plus **Socket.IO** real-time support messaging.

MAZE, Remote —*Backend Engineer*

November 2023 - 2025, REMOTE

[WEBSITE](#)

Building.

- The project is being structured using the MVC framework built on Nodejs and TypeScript.
- Implementation of unit tests using Jest.
- Implementing CI/CD on GitHub to ensure the reliability and integrity of our code.
- Implemented a sophisticated Authentication process using JWT for user authentication.
- Collaborate with cross-functional teams to deliver technical solutions that enhance productivity and operational efficiency
- I created the project documentation using Postman.
- Implemented EtherJs and Solana(Web3js).

MarkCalthers, Lagos— *Full-stack developer/IT Executive*

[WEBSITE](#)

Consulting Company in Lagos, Nigeria Mar 2023 - Feb 25, FULL-TIME

- One of my notable achievements in MCC is building an API form on a project and it accelerates the process of onboarding by 80%.
- Developed Jobslounge using PHP, Laravel, Axios, jQuery form Validation, and Bootstrap
- Created a digital voucher platform to create, retire and manage of cash transactions in the office.
- Developed MCM studios with ReactJS, typescript and Laravel API
- Assist in software installation and configuration, ensuring seamless integration with existing systems for internal teams
- Provide technical support to colleagues and outsourced staff, ensuring efficient resolution of email and software-related issues
- Troubleshoot and resolve technical problems, maintaining high levels of service availability and user satisfaction
- I built an exam platform at MCC that has been used to test staff internally. The test platform has two types: objective questions and fill-in-the-gap questions.

KGS BETs, Remote — *Software Engineer*

[WEBSITE](#)

January 2023 - Feb 2024

Building.

- Built the KGSB with Laravel and JavaScript and currently serves over fifteen thousand customers around the globe.
- Integrate jQuery Ajax to load games from the football-API.
- Implemented a cron job in Laravel to load 30 games from the API at 8:00 am WAT daily for users.
- Implemented an algorithm that predicts NBA games, because we couldn't get NBA game predictions from the API.
- Developed an admin area that oversees the activities on the platform.

.jQuery Ajax, PHP cURL, Laravel, Bootstrap.
